Endura[™]
Super Power BTE

The power to keep up
with your child's hearing needs.

Power up trusted technology for your child.

It takes a lot to keep up with kids' energy, their curiosity, and their enthusiasm. And when children experience severe to profound hearing loss, they need a solution to keep up with that, too.

The Endura Super Power BTE is a behind-the-ear instrument with both kids and power amplification in mind. Because we know how important it is to diagnose hearing loss early and treat it right, Endura is designed to deliver not just high-level output, but high-quality sound. With the muscle of Sonic Innovation technology behind them, kids can have the most effective hearing aid experience possible while their speech and language skills and habits are developing.

WITH ENDURA,
you'll be the one hearing about
your child's success.

The super power your child has always wanted.

Where does Endura get its super power abilities? It's part of the Sonic Innovations family of products. Our industry-recognized digital technology is chosen and appreciated by more than 1 million patients around the world. It's changing the way they experience sound. Endura can do it for your child, too.

Super Output Not all behind-the-ear (BTE) devices are equal. Unlike some BTEs that focus on just a few peak hearing frequencies, the Endura Super Power BTE delivers exceptional sound, providing amplification across all frequencies.

Super Sound Receiving high-quality sounds can make a difference in your hearing experience. That's why Endura isn't just amplification, it's a balanced hearing solution. With our sophisticated directionality and feedback control, Endura processes the most natural sounds possible.

Super Features Sonic Innovations hasn't forgotten what it's like to be a child, either. Endura comes in 6 different colors that can be customized with fun stick-ons. The battery is easy to change, but also easy for you to safely lock in place with Endura's tamper-resistant battery lock feature. And Endura even comes with integrated Direct Audio Input (DAI) which makes it simple for your child to connect an MP3 player, cell phone, and get Bluetooth connectivity when paired with our sonicBLU accessory.
